

## Software release 2.0

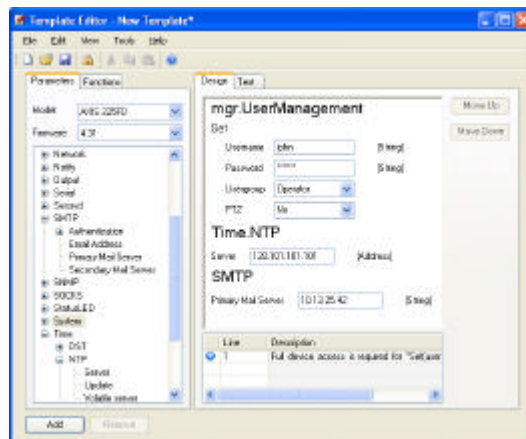

AXIS Camera Management upgrade to version 2.0 is free of charge and available at [www.axis.com](http://www.axis.com). Settings and database will retain during upgrade.

### The main highlights are:

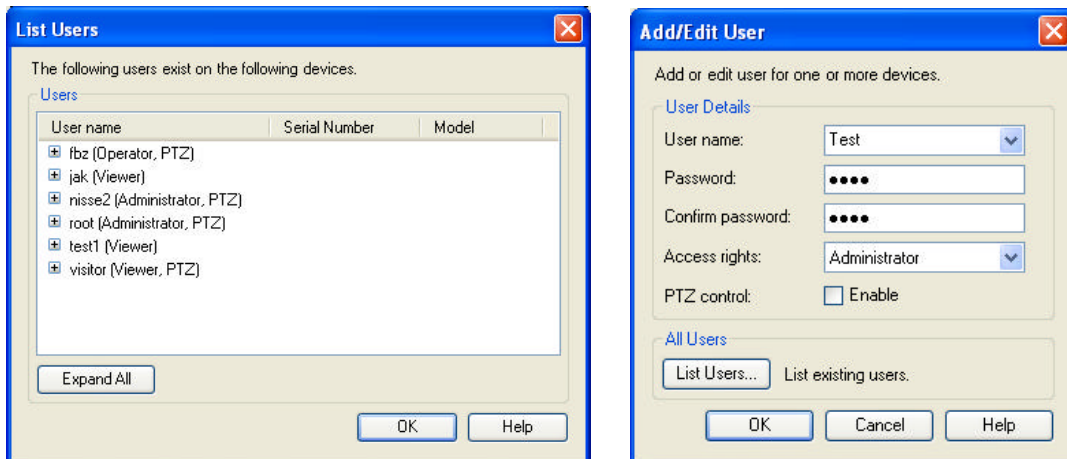

#### **Single and multiple unit configuration**

AXIS Camera Management now supports single and multiple unit configuration of Axis video products. Single units can be configured directly while multiple units are configured from a template created either from another unit or from scratch. An advanced template editor is available to create templates.

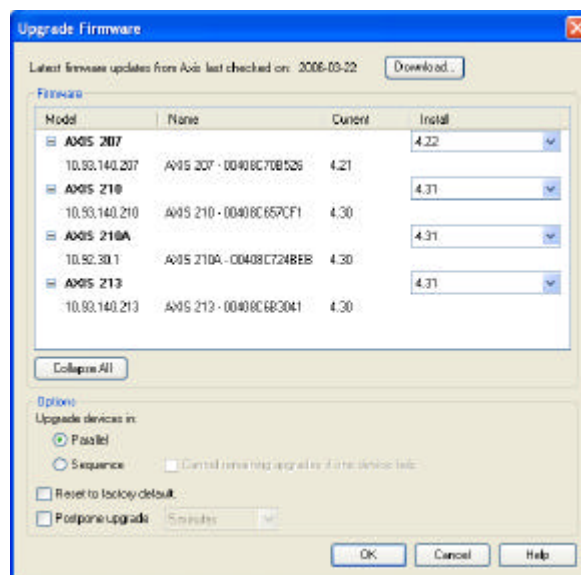

## User management

It is now possible to list, add and remove users in single or multiple Axis video products.

## Automatic download of latest Axis video product firmware

If a MyAxis account is specified, AXIS Camera Management can automatically download the latest available firmware from [www.axis.com](http://www.axis.com) minimizing any manual steps during the upgrade process.

### ***Other improvements***

- Thumbnails of camera images can now be shown for easy identification.
- Event Log improved with sort possibility.
- Direct access to Axis video products setup homepage.
- Added support for restarting devices and restoring factory default settings.

### ***Upgrade considerations***

- If not already present, Microsoft .NET 2.0 Framework will be installed during the installation.
